

Enterprise Modernization Jumpstart Pilot Projects

Jumpstart Your Paths to Modernization

ClearBlade's Jumpstart offerings provide you with a fixed-price, fixed-scope way to start your Enterprise Modernization efforts. Develop flexible and platform independent applications with IBM's new language for business development, Enterprise Generation Language (EGL).

- Complete a pilot project on your system
- Engage your development team to "look under the hood" before investing in a full project
- Gain a clear business vision on how to proceed

Your Jumpstart options:

Reface – create a new modern web front-end to your existing 3270/5250 applications with HATS (Host Access Transformation Access Service) or EGL.

Build – we will collaborate with your team to build a new application with EGL. This will provide you with a clear vision on creating modern web applications for System i, System z, Power systems and other distributed platforms.

Transform – we will convert your RPG, COBOL, Natural or other 4GL code to EGL, so you can eliminate skills silos, and create and/or extend an application that is not locked into a specific computing environment.

Refactor – after analyzing your code and generating documentation, our EGL specialists will collaborate with your team to create re-usable components from your existing application to be called by new EGL programs. You will see, first-hand, the fast delivery of new business solutions with your existing resources.

Jumpstart Pilot Project

ClearBlade's Jumpstart pilot offerings allow you to spend a few weeks with our specialists to modernize one of your business applications. Your legacy systems have value, let us help you extract and extend that value. Doesn't it make sense to begin by sampling a few colors before you paint the entire house?

Pricing

For a fixed cost + expenses, our experts will work with your team for a specified period, including onsite collaboration. We will modernize a portion of an existing application and mentor your staff on the process. We will work together to identify the scope and functionality of the new system prior to project start.

Follow-on Project Discount

If you decide to move forward with a follow-on project, ClearBlade will apply **up to 50%** of the cost of the Jumpstart Pilot towards the new project.
