

## Enterprise Modernization Pilot Refactor Jumpstart

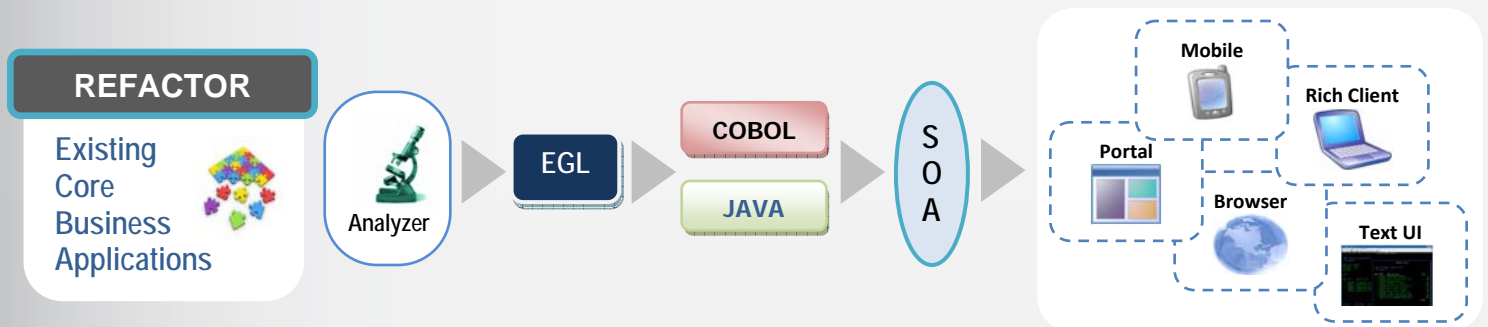

### Refactor Your Existing Applications with EGL

Create reusable "Green Code" components from your existing business applications. Build new web applications in Enterprise Generation Language, (EGL) that access these reusable components to see how EGL integrates with your existing code.

- Analyze your existing code
- Generate code documentation
- Utilize EGL technology
- Refactor your existing applications
- Plan a roadmap for the migration of your existing applications

EGL is designed to help accelerate the development of web and SOA applications by hiding the Java language, web service standards, and the platform and middleware details from the developers.

### Jumpstart Pilot Project

ClearBlade's Refactor Jumpstart Pilot allows you to typically spend several weeks with our specialists to modernize one of your business applications. Your legacy systems have value, let us help you extract and extend that value. Doesn't it make sense to begin by sampling a few colors before you paint the entire house?

### Pricing

For a fixed cost, our experts will work with your team for a specified period, including onsite collaboration. We will modernize a portion of an existing application and mentor your staff on the process. We will work together to identify the scope and functionality of the new system prior to project start.

### Follow-on project discount

If you decide to move forward with a follow-on project, ClearBlade will apply up to 50% of the cost of the Jumpstart Pilot towards the new project.

### Contact us

To get started on your Jumpstart pilot project today, or to learn more about our Jumpstarts contact ClearBlade at: **(512) 686-3037**
