

BUSINESS READY IOT, EDGE AND AI

Frustrated with your lack of progress in IoT? Confused about Edge computing? Tired of the empty promises of AI? Then Intelligent Assets is for you. Software for business people, not developers.

CONNECT ANY ASSET

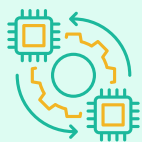

ClearBlade's Intelligent Assets application enables you to connect, monitor, and control any asset in your business, all without needing a computer science degree or expensive services from a systems integrator.

NO MORE IOT SCIENCE EXPERIMENTS

Engineers love Intelligent Assets too. That's because we built it right, enabling engineering to customize the core of Intelligent Assets and take control of the application, on your terms. Use whatever cloud you prefer, or deploy on-prem. You can also use whatever hardware you're comfortable with. Stop building everything from the ground-up and start customizing a proven engine that scales efficiently and allows you to solve your higher-level business problems that make a difference. Stop the IoT Science Experiments and start driving ROI for the business.

PROVEN INTELLIGENT ASSETS DEPLOYMENTS

CONNECTED PRODUCT

Industrial HVAC, drones, railroad crossings, etc.

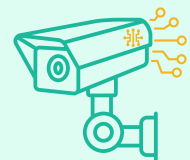

ASSET TRACKING

Maintenance equipment, railcars, tractors, boats, etc

SMART MONITORING

Railroad crossings, oil & gas equipment, marine equipment, etc.

VIDEO AI

Customer service, security, occupancy, safety, etc.

Intelligent Assets is available direct from ClearBlade or on Google Cloud Marketplace
